 GI

AB Renal elimination of tilidine-HCl (I) [27107-79-5] was similar in the rat, dog, and man. After oral administration of I-14C 50-60, 80, and >90% of the applied dose was eliminated in the urine in the resp. species. The half-life of renal 14C elimination was 8 h in the rat and man, and the elimination was faster in the dog. In all species, about 17% of the urinary radioactivity was in nonpolar metabolites. About 2-3% each was in nortilidine [38677-94-0] and bisnortilidine [53948-51-9], and <0.2% in unchanged I. Most of the polar metabolites were glucuronides. Five new metabolites, oxygenated derivs. of nortilidine and bisnortilidine, were isolated from rat urine.

 AB Twenty-eight Et cyclohexenecarboxylates [I; R = H, Me, Et, Bu; R1 = H, Me, Et, Bu, allyl, phenylalkyl, etc.; NRR1 = morpholino, substituted piperazinyl, substituted piperidino] and (or) their salts useful as analgesics, antipyretics, sedatives, etc., were prepared from the cyclohexene (II; R4 = OAc). II (R4 = OAc) was hydrolyzed and then halogenated to give II (R4 = halo), which was treated with R1NHR to give I. II (R4 = OAc) was prepared by treating Et atropate with MeCH:CCHO-Ac2O.

AB Title compds. were prepared Thus, under anhydrous conditions, 21.2 moles Me₂NH was condensed at 5° over 2.5 hr into a mixture of 42.3 moles crotonaldehyde, 2120 ml benzene, 10.6 g phenanthrenequinone, and 21.15 moles K₂CO₃, the mixture stirred 15 min. and purged with N, 18.95 moles Et atropate added, the mixture heated to 75°, the external heat removed, and the temperature allowed to increase to 90° before external cooling was applied. After the exothermic reaction had ceased, the mixture was held 2 hr at 90-5°, then worked up to give 4135 g 3-dimethylamino-4-phenyl-4-carbethoxycyclohexene (I) (60% cis, 40% trans) containing <0.1% Et 2-phenyl-3-dimethylaminopropionate (II). This was added to 17.7 l. N HCl at 65°, the whole heated 1.5 hr at 70°, cooled to 35°, washed with petroleum ether, with activated C and diluted with water, treated at 25-30° with a ZnCl₂ solution containing 2.06 kg ZnCl₂, 10.4 l. H₂O, and 108 ml. concentrated HCl, the mixture held at 0-5°, 3.4 kg Zn complex cis-I filtered off, and the filtrate treated with aqueous NH₄OH at 25° to give I containing 80% trans isomer and 20% cis isomer, together with 0.25% II. This product was combined with EtOAc and anhydrous HCl in EtOAc, the pH adjusted to 3.5-4, and the mixture heated to boiling and filtered hot to give 1119 g trans-I.HCl, m. 160-2°, containing 1-2% cis isomer and 0.25-0.5% II after washing. Stirring with THF at 25° gave 1011 g trans-I.HCl, m. 159-63°, containing 0.25-0.75% cis isomer and <0.25% II. Similar results were obtained by using EtOAc at 75° instead of THF at 25°. Similarly prepared were 3-dimethylamino-4-phenyl-4-carbethoxy-6-ethylcyclohexene-HCl (III.HCl) (cis isomer m. 157-9°, trans isomer m. 205.5-207°), and 2-methyl-3-dimethylamino-4-phenyl-4-carb-ethoxycyclohexene-HCl (cis isomer m. 185-7°, trans isomer m. 184.5-6.5°). The compds. are useful as analgesics.
